

LOVE ENGINEERED

Manufacturing the Ideal Valentine's Day Gift

RAISE YOUR GLASS

Self-Cleaning Clarifiers

Before that first sip, your favorite wine undergoes a post-fermentation clarification process, utilizing methods such as centrifugation to swiftly remove residuals without compromising taste and quality.

STOP AND SMELL THE ROSES

CombiLine Pumps

Your beautiful bouquet is made possible through pumps that help flowers grow by regulating temperature--transferring heat from the storage tank to a manifold, which then releases it into rose greenhouses.

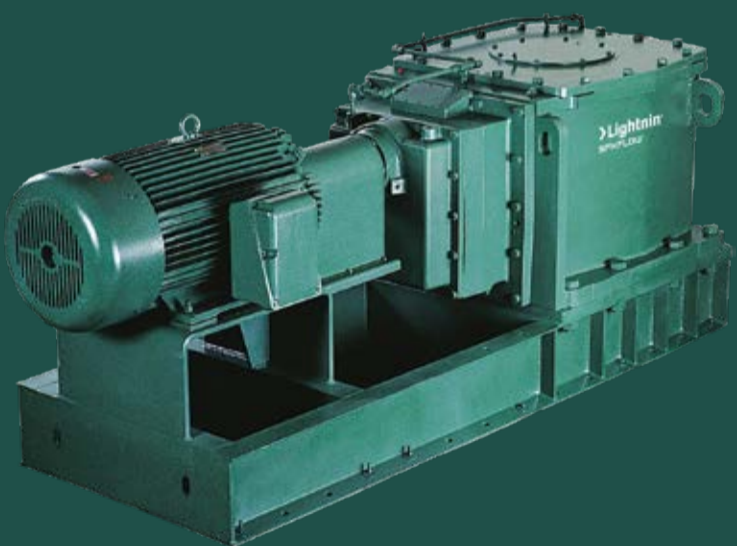

> **Johnson Pump®**

ALL THAT GLITTERS IS GOLD

700 Series

Through specialized hydrometallurgical processes, mixers are used to extract silver, gold and platinum from rock ore, ultimately used to manufacture that beautiful piece of jewelry.

> **Lightnin®**

SCENT-SATIONAL ELEGANCE

ECL Series

Blending the perfect scent requires the efficient agitation of fragrant flowers to extract their aromatic oils, which are transformed into an enchanting perfume.

> **Lightnin®**

A SWEET FOR YOUR SWEETHEART

Universal Pumps 1,2,3

Decadent chocolate hearts are made possible because of Universal Series pumps that regulate the temperature, flow rate and viscosity of chocolate product as it transfers through process lines.

PAPER CARDS

Cylinders, Pullers and Pump Solutions

Where greeting cards are made, our hydraulic cylinders, pullers and pumps maintain the equipment behind your message of love.
